MARCH

079-286

11:30 am
Step 1

Full stack Develop

Front end/
UI develop
{client side}

Back end
develop
{Server Side}

For Example:-

Such www.fb.com
(opens)

Server

Node JS
Java
Python
PHP

<Input type="button">
Login </var = document

* Types of front end
are as follows:-

- i) HTML (Structure)
- ii) CSS (Which button to insert)
- iii) JavaScript (function of button)

minimize
maximize
close

CSS

Angular/React/Vue/Back D--

Most demanding

30	31	1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16	17	18

2017

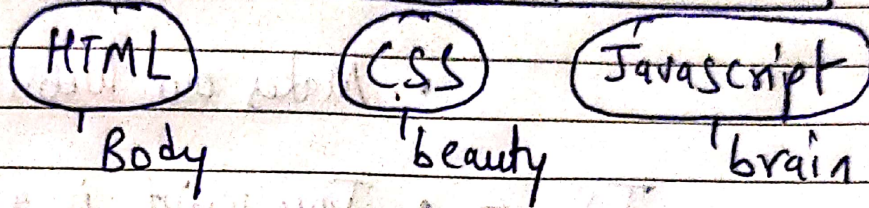

MARCH
TUESDAY

06

080-285

- For making Website HTML is necessary
- CSS adds beauty
- Javascript adds brain

Website with beauty & brain

client req for website

www.fb.com

Web Server
(IP)

- PHP
- python
- Node JS

Server returns the response

HTML CSS JS

client

- fb.com client req, fb.com it goes to server
- Server (python) process HTML, CSS & JS
- This 3 things come back to PC then web browser received document as text.
- document ko manipulate krta hai website dikhta hai (display)

Scanned with OKEN Scanner

MARCH					

HTML - • Hyper text markup language
• well standardized system

CSS - • Cascading style sheets (stylesheet is used to handle present)

• Makes our website beautiful & Modern

JS - • JavaScript is a high-level dynamic interpreted programming language.
• Allows client-side to create completely dynamic web apps & websites.

step 2 • Install Visual Studio Code
